Values and approach

- critically relate to sustainability from an ethical, cultural and historical perspective
- demonstrate awareness of ethical aspects of research and development work
- demonstrate insight of the possibilities and limitations of science regarding the issue of sustainable development

Course content The course begins with an introduction of concepts such as sustainable development, health, holism and work from an interdisciplinary perspective. This is followed by a review of different concepts of nature, their conditions and view on work. These concepts are then reviewed and problematized using critical analysis and discussion focused on ethics, power, risks and possibilities, historical examples, separate culture and world views as well as esthetics. Finally, the acquired theoretical knowledge in a specific area of work life is applied. The course aims at an interdisciplinary work process, where health is related to a sustainable life environment with technical, social, economical and existential aspects.

Teaching Lectures, seminars and workshops.

Prerequisites 60 credits in Master programme in Religious Studies
English language proficiency equivalent to (the Swedish upper secondary school) English course 6.

Examination Assignment and written exam.
